

EDITORIAL

It gives me great pleasure to introduce this new journal “*Journal of Basic Pharmacology and Toxicology*” to all fellow academicians and researchers. There are many journals existing in the scientific publishing field, covering the area of pharmacology and toxicology ranging from preliminary screening to exploration of molecular mechanisms. However, there is always a growing demand from researchers from developing countries about a suitable and quality journal for publication of their basic pharmacological and toxicological research conducted with crude natural products. In this juncture, *Journal of Basic Pharmacology and Toxicology* aims to provide a quality and professional platform for researchers from developing countries to publish their basic research on pharmacology and toxicology of natural and synthetic products. This journal’s intention is to promote publication of quality research in a professional format and in an ethical way with the aim to keep the quality of articles intact and get indexed in PubMed in future.

In our maiden issue, there is a review article by Karuna Kumari et al. on polysorbate-phospholipid complex micelles as P-glycoprotein inhibitor drug delivery system. In this review, Karuna Kumari et al. reviewed the formulation technology within the framework of drug delivery especially into brain. In original research article section, MacDonald Idu et al. reported on the phytochemical, antimicrobial and toxicity evaluations of *Greenwayodendron suaveolens* and Vishal Gulecha et al. reported on the analgesic and anti-inflammatory effects of *Ficus glomerata*.

I hope this maiden issue of *Journal of Basic Pharmacology and Toxicology* serves its purpose and useful to its readers.

Mohamed Saleem Abdul Shukkoor, Ph.D., M. Pharm., B. Pharm.

Editor-in-Chief

Journal of Basic Pharmacology and Toxicology
